Figure 2. Box-plots showing men and women’s scores (median, lower- and higher quartiles) on Health-related quality of life at baseline and at 12-month follow-up ($n = 67$).

* Significant differences ($P < 0.05$) within groups between the two time points (paired-samples t-test).

b Significant differences ($P < 0.05$) between groups at 12-month follow-up (independent-samples $t$-test).
