Figure 1

The figure shows the survival probability over months for different tumor sizes. The x-axis represents the months (0 to 120), and the y-axis represents the survival probability. The lines indicate the survival rates for tumors larger than 3 cm (green line) and tumors less than or equal to 3 cm (red line). The survival probability decreases over time for both categories, with tumors larger than 3 cm showing a higher survival rate compared to those less than or equal to 3 cm.
