Figure A: Bar graph showing follicular diameter (mm) for different groups HH, HHV, LH, LHV, LL, and LLV. The graph indicates a statistically significant difference (P<0.001).

Figure B: Line graph depicting the change in cross-sectional CL area surface (cm²) over days after ovulation (0-12). Different letters (a, b, c) indicate significant differences between groups.

Figure C: Bar graph illustrating the cross-sectional CL vascular area (proportion of the CL area) for groups HH, HHV, LH, LHV, LL, and LLV. Different letters (a, b, c) signify significant differences among groups.

Images C-1 and C-2 show histological sections with arrows indicating specific features.
