Figure 4

The bar graph shows the maximum binding capacity ($B_{\text{max}}$, pmol/g ovary) of estradiol receptors in oocytes treated with various concentrations of hCG. The treatments are as follows:

- Control
- 1 IU/ml
- 7 IU/ml
- 14 IU/ml

The graph indicates an increase in $B_{\text{max}}$ with higher hCG concentrations, with significant differences marked by 'a' and 'b'.
