**Figure 5**

The graph displays the relationship between hCG exposure time (hours) and various ovarian responses, including:

- **B<sub>max</sub>** (pmol/g ovary)
- **GVM (%)**
- **GVBD (%)**

The y-axis represents B<sub>max</sub> (pmol/g ovary) ranging from 0.0 to 7.5, while the x-axis represents hCG exposure time (hours) ranging from 0.0 to 20.0 hours.

Statistical significance is indicated by asterisks (*) on the graph.
