Figure 2

**A**

Portion of the image showing bar graphs for porcine Corpora Lutea. The graphs compare FPR mRNA (Delta Ct) across different stages labeled as EL-p, ML-p, and P-p. The graphs illustrate the relative expression levels with bars labeled a, b, and c.

**B**

Bar graph depicting FPR protein (AU) across the same stages EL-p, ML-p, and P-p. The bars are labeled a, b, and c, indicating different expression levels.

**C**

Western blot analysis showing bands for FPR across various stages. The blot includes samples labeled MVVM, EL-p, ML-p, and P-p, with bands indicating the presence of FPR at different molecular weights.
