Figure 4

**A**

Graph showing levels of TNFalpha (pg/ml) for different treatments: DMSO, Rosi 30 μM, GW9662, Rosi+GW, hCG, and hCG+Rosi. Each bar represents the mean with error bars indicating standard deviation. The asterisk (*) denotes a statistically significant difference.

**B**

Graph showing levels of IL-6 (pg/ml) for the same treatments as in A. The graph indicates a significant increase in IL-6 levels under the hCG+Rosi condition compared to other treatments.
