Figure 1

The figure shows two bar graphs comparing the percentage of aneuploid embryos (top) and the mean number of aneuploid embryos (bottom) between DHEA and control groups. The percentage of aneuploid embryos in the DHEA group is significantly lower than in the control group (P < 0.001). Similarly, the mean number of aneuploid embryos in the DHEA group is significantly lower than in the control group (P = 0.03).
