Figure A: Graph showing cell viability (as % of Ctrl) for various treatments: Control, 10^{-6}M ICI, 10^{-6}M, 10^{-5}M, 10^{-4}M, 10^{-3}M, 10^{-2}M, and 10^{-1}M. An asterisk (*) indicates significant difference from the control.

Figure B: Bar graph showing large cloning efficiency (% of control) for treatments 17βE_2 and 17βE_2+10^{-6}M ICI. Bars indicate variation with error bars.

Figure C: Similar to Figure A, showing large cloning efficiency for the same treatments.

Images B: Small clone and large clone comparisons with scale bars.
