Percentage of patients who did not receive thromboprophylaxis compared to those who received it, across different patient categories:

- **All patients**:
  - Previous study: 64%
  - Current study: 36%
  - P < 0.001

- **Medical patients**:
  - Previous study: 78%
  - Current study: 57%
  - P < 0.001

- **Surgical patients**:
  - Previous study: 56%
  - Current study: 44%
  - P < 0.001

The graph illustrates a statistically significant difference (P < 0.001) in the percentage of patients receiving thromboprophylaxis between the previous and current studies for all patients, medical patients, and surgical patients.
