Figure S5: Response of selected Hh pathway genes to siRNA mediated knockdown of Ptc1

qRT-PCR analyses of (A): Smo, Ihh and Shh; (B): Ptc2 and Hhip1, (C): Fu and Sufu and (D): Gli1 and Gli2 in cultured hepatocytes of male C57BL/6N mice in response to transfection with Ptc1 siRNA (black bars) (n=7-8) compared to nonsense transfection (white bars) (n=7-8) after 48 h of incubation. Values are presented as relative means ± SEM.
