![Graph showing the relationship between DDP concentrations (mg/ml) and survival percentage (%). The graph compares control, Lipofectamine, dsRNA-unrelated, and dsRNA-EGFR treatments. The x-axis represents DDP concentrations (mg/ml) ranging from 0 to 50, and the y-axis represents survival percentage (%) ranging from 0 to 1.2. The graph indicates a decrease in survival percentage with increasing DDP concentrations for all treatments.](image-url)
