Figure 4: Development in the intake of saturated fat (E\%) from baseline to five year follow-up

†: P value for difference in the development in intake between group A and B from baseline to one-, three-, and five-year follow-up. *: Indicates a significant difference in intake between group A and B, P<0.05. Results are adjusted for age, smoking, physical activity, alcohol, education, employment, living with partner, perceived risk associated with dietary habits, self-rated health, total fat and energy intake.
