Figure 13

The figure shows box plots for two different measures: 6-minute walk distance (left) and quality of life score (right).

**6-minute walk distance**:
- Baseline vs. Follow-up for pacing over non-scar and pacing over scar.
- The p-value for the difference between baseline and follow-up for pacing over non-scar is 0.011.
- The p-value for the difference between baseline and follow-up for pacing over scar is not statistically significant (NS).

**Quality of life score**:
- Baseline vs. Follow-up for pacing over non-scar and pacing over scar.
- The p-value for the difference between baseline and follow-up for pacing over non-scar is 0.0003.
- The p-value for the difference between baseline and follow-up for pacing over scar is not statistically significant (NS).
