Surgical Assessment – transfer for this if needed

Assess Blood Pressure + Set Treatment Target

Not shocked
- Control heart rate and blood pressure:
  - beta-blockade
  - Opiate analgesia
  - If systolic BP remains > 120 mmHg add intravenous vasodilator

  Involves ascending aorta
  - No
    - Medical management + monitoring
  - Yes
    - Complications: malperfusion, dissection progresses, hypertension

  Requires surgery

  Type B
  - Fluids/vasopressors
  - Evaluate imaging for cause of hypotension
  - Surgical assessment

  Type A
  - Yes
    - Requires surgery
  - No
    - Oral medical therapy

Surgical Intervention
