Algorithm 3: Whenever the sender receives add dupacks

1. Retransmit Delay();
2. Receives add-dupacks
3. Increment cwnd
4. Send new packets
5. If (add-dupacks ≥ 'delay-thresh') {
6.     Retransmit the packet
7.     cwnd = now
8. } else {
9.     Continue sending packets until cwnd > ssthresh
10. }
11. }
