Fig. 10. Throughputs for STAs A, B, and C vs. the number of flows assigned to STA A. We used the model in Fig 8.

Fig. 11. Throughputs for the client and the provider vs $\beta$ when (a) $\alpha = 0.3$, (b) $\alpha = 1.0$ with one additional TCP flow other than client and provider (other). We used the model in Fig 8.
