Figure 9. Local (a) MAP probabilities $P_{k,\text{max}}^{(m)}$ in comparison to (b) MAP probability estimates $\hat{P}_{k,\text{max}}^{(m)}$ obtained by the individual clusters using the AMC algorithm. In the latter case the maximum time difference between two lines equals two.

Figure 10. Source coordinate estimates (a) $\hat{i}_k^{(m)}$ and (b) $\hat{j}_k^{(m)}$ of the individual clusters.
