The Stability of IBRC

Average Number of Sacrificed SSs

Resource Budget

- M=0
- M=5
- M=10
- M=15
- M=20

The graph illustrates the stability of the Inter-Bank Rate Contract (IBRC) under different resource budgets and values of M, which represents a parameter related to the sacrifice of SSs. The x-axis represents the resource budget, while the y-axis shows the average number of sacrificed SSs. The curves for different values of M show variations in the stability of the IBRC across various budget levels.
