Outage Probability vs. $P_{av}(dB)$

- **PFPPC+EPPC**
- **PFPPC+ZPiOR**
- **PFPPC**

The graph shows the outage probability for different schemes as a function of $P_{av}(dB)$. The x-axis represents $P_{av}(dB)$, and the y-axis represents the outage probability on a logarithmic scale from $10^{-4}$ to $10^0$. The schemes are compared at various $P_{av}(dB)$ values, with PFPPC+EPPC showing the lowest outage probability at higher $P_{av}(dB)$ values.
