BER vs SNR [dB] for different synchronization conditions and block lengths. The graph shows that the BER decreases as the SNR increases, with synchronization improving BER performance. The markers indicate the BER for different SNR values:
- **Black dashed line**: no sync. error
- **Magenta star**: with sync., $K = 32$
- **Blue circle**: with sync., $K = 64$
- **Red square**: with sync., $K = 128$
