The diagram illustrates a process involving various databases and stages of data extraction. Starting with a total of 20,430 records from different sources, the process is divided into three stages:

1. **1st stage: Title**
   - Input: 20,430 records
   - Output: 379 records

2. **2nd stage: Abstract**
   - Input: 379 records
   - Output: 58 records

3. **3rd stage: Full text**
   - Input: 58 records
   - Output: 28 records

These stages represent the filtering and selection process for retrieving relevant data.
