Fig. 8. Spectral regrowth with and without predistortion including crosstalk between the transmitters $\rho = -20$ dB (Spectral mask defined for mobile Wimax is plotted). Measurement noise $SNR = 40$ dB, IQ imbalance of $\lambda_1 = 5\%$ and $\phi_1 = 5^\circ$, $\lambda_2 = 3\%$ and $\phi_2 = 3^\circ$, and DC offset, $|\epsilon_1| = 0.1$ and $|\epsilon_2| = 0.07$ for a) PA 1, b) PA 2
