The plot shows the BER (Bit Error Rate) as a function of the standard deviation. Different markers and line styles represent various methods:

- **RST** (blue line with circles)
- **FAST** (green line with Xs)
- **SIFT** (red line with pluses)
- **SURF** (cyan line with asterisks)
- **Dong et al.** (pink line with squares)
- **Tian et al.** (gray line with diamonds)

The x-axis represents the standard deviation, while the y-axis represents the BER. The line styles and markers help distinguish between the different methods in the graph.
