Change in Blood Pressure from LRC to PFS

Mantel-Haenszel $\chi^2 = 17.8$, $p < .0001$

Percent of subjects

T2DM at PFS ($n = 29$)
- Normal to Normal: $34\%$
- High to Normal: $34\%$
- Normal to High: $28\%$
- High to High: $3\%$

No T2DM (Glucose < 100 mg/dl) at PFS ($n = 417$)
- Normal to Normal: $65\%$
- High to Normal: $5\%$
- Normal to High: $26\%$
- High to High: $5\%$

n = 10, 1, 10, 8, 269, 21, 107, 20
