Figure 2. Flow cytometry dot plot result in a patient with rocuronium-induced anaphylactic shock.

Pb = initial plot identifying basophils; Pc\(_n\) = negative control; Pc\(_{p1}\) = positive control with FcεRI; Pc\(_{p2}\) = positive control with N-formyl-Met-Leu; Pc\(_1\) = allergen rocuronium 500μg/mL; Pc\(_2\) = allergen rocuronium 50μg/mL; Pc\(_3\) = allergen rocuronium 5μg/mL.
