The bar graph compares the levels of IL-4, IL-5, IL-6, and IL-13 across different genotype treatment groups: CWT, WTO, CKO, and KOO. The y-axis represents the relative units, and the x-axis represents the genotype treatment groups. The bars show the mean values with error bars indicating variability. The KOO group shows a significant increase in IL-6 levels, as indicated by the asterisk. The error bars suggest that the differences are statistically significant.
