We invite you to take part in a research study

• Before you decide whether to take part, it is important for you to understand why the research is being done and what it will involve.

• Please take time to read the following information carefully. Discuss it with friends and relatives if you wish. Take time to decide whether or not you wish to take part.

• You are free to decide whether or not to take part in this research study. If you choose not to take part, this will not affect the care you get from your own doctors.

• Ask us if there is anything that is not clear or if you would like more information.

• Thank you for reading this information. If you decide to take part you will be given a copy of this information sheet and your signed consent form.

Important things that you need to know

• We want to find out the best non-intensive treatment for Acute Myeloid Leukaemia (AML) and Myelodysplasia (MDS).

• We are testing three new medicines, which are Clofarabine, Mylotarg and Trisenox, and an existing medicine, which is Cytarabine.

• The medicines are given separately or together with other medicines, and this trial has four different groups or treatment options.

• Regardless of which treatment group you are in, you will receive four courses of treatment.

• Like all medicines used to treat leukaemia, the medicines used in this trial can have side effects.

• The trial fits into your normal treatment, so there are no extra hospital visits.

• You can stop taking part in the study at any time, without giving a reason.
