The image shows a bar chart that compares the reduction of migration [%] for different conditions. The conditions include:

- PTx at 0.05 µg/ml
- PTx at 0.5 µg/ml
- PTx at 5 µg/ml
- Filtrated <3kDa
- Heated at 60°C

The chart includes two sets of data:

- LNB CSF
- 500ng/ml rhCXCL13

The y-axis represents the reduction of migration [%], ranging from 0 to 100, while the x-axis lists the different conditions. The chart visually compares the effectiveness of each condition in reducing migration.
