Figure S2

The figure shows a bar graph comparing NLRP3 mRNA expression in THP-1 cells and THP1-defNLRP3 cells with and without PMA treatment. The y-axis represents NLRP3 mRNA (RFC) expression levels, while the x-axis indicates different conditions: THP-1 (both - and + PMA) and THP1-defNLRP3 (both - and + PMA). The graph illustrates that PMA treatment increases NLRP3 mRNA expression in THP-1 cells but has a smaller effect in THP1-defNLRP3 cells.
