The diagram shows the expression levels of viral proteins in different strains of HIV at various Day PI (Post Infection) points. The proteins include gp70 (Env), p30 (CA), and p15E (TM).

- **A** shows gp70 (Env) expression in RII-10, RYh-10, and RLq-10 at Day PI 42, 134, and 167.
- **B** highlights p30 (CA) expression in the same strains.
- **C** indicates p15E (TM) expression in the strains.

The relative intensity of bands suggests differences in protein expression levels across the different days and strains.
