A) Schematic representation of JR-FL SOSIP.R6 constructs. gp120 is shown in gray, gp41 in black, tPA in light blue, SS in pink, IZ in red, and His STOP in blue.

B) Gel electrophoresis showing protein bands for gp120, SOSIP.R6, and SOSIP.R6-IZ under denatured and reduced conditions. The bands are labeled as trimer, dimer, and monomer.

C) Western blots for SOSIP.R6 and SOSIP.R6-IZ showing fractions 669 kD, 440 kD, and 67 kD.
