Figure 1

The figure shows bar charts depicting specific cytolytic activity (%). The x-axis represents specific cytolytic activity (%), and the y-axis represents different peptides (ΔNef, Wt, 85F, 75T, TF) and regions of the protein (VY8, 33-1, 19-142, RY11, 03-8). The bars are shaded in different colors to represent different ET values (ET=0.125, ET=0.5, ET=2).
