Supplementary Figure 1. Expression of SIV Vpx mutants. SIV molecular clones lacking *vpx* were complemented in *trans* with indicated Vpx mutants and wild type Vpx with Flag epitope tags by transient transfection of 293T cells. MG132 was added 24 h post-transfection. Cells were lysed in Laemmli sample buffer at 48 h and Vpx expression was analyzed by immunoblot using anti-Flag monoclonal antibody.
