216 million children died before age 5 in 1990-2012

90 million lives saved since 1990

To achieve MDG4: additional 3.5 million children's lives need to be saved in 2013-2015

If current trends continue in all countries, the world will not meet the MDG 4 target until 2028. By then, additional 35 million children will die.

Still, 15 million children would die before age 5 in 2013-2015 even if all countries achieve MDG 4 target by 2015
