Yager, et al., Figure 8

The figure shows a scatter plot with data points representing PFU (Log_{10}) / lung for young and aged groups over different days post infection. The limit of detection is indicated by a dashed line.

- **Young**: Denoted by solid black circles.
- **Aged**: Denoted by open white circles.

The x-axis represents days post infection, with markers at 7, 10, 15, 30, and 60. The y-axis represents PFU (Log_{10}) / lung, ranging from 0 to 4.
