The diagram shows the distribution of mutations at various positions in NRTI and NNRTI sequences. Four distinct variants are highlighted: first variants, fourth variants, and two others. The x-axis represents the positions (41, 62, 65, 67, 69, 70, 74, 75, 215, 219, 101, 103, 108, 181, 188, 190), and the y-axis represents the number of mutations, ranging from 0 to 16. Each position is assigned a color code to differentiate between the variants.
