Figure A: Western blots showing K18 pS33, K18 pS52, and Tubulin levels in Inactive Cirrhosis and Active Cirrhosis.

Figure B: Western blots showing K18 pS33 and pS52, and Tubulin levels in MiH, MeH, AdH, Inactive-LC, and Active-LC.

Figure C: Box plot showing the relative phosphorylation level of K18 Ser52 in different disease progression stages: Normal, MiH, MeH, AdH, Inactive-LC, and Active-LC.

Figure D: Box plot showing the relative phosphorylation level of K18 Ser33 in different disease progression stages: Normal, MiH, MeH, AdH, Inactive-LC, and Active-LC.
