Figure 1

- **Lymphocytes**
  - Percent Total Cells vs. Days after challenge.
  - The graph shows a decrease in lymphocyte percentage from 60% on Day 0 to approximately 10% on Day 17.

- **Platelets**
  - Count x 10^3 vs. Days after challenge.
  - The graph shows an initial decrease followed by an increase on Day 13.5.

- **D-Dimers**
  - Concentration (ng/ml) vs. Days after challenge.
  - The concentration increases dramatically from Day 3 to Day 13.5, peaking at about 7000 ng/ml.

- **Activated Protein C**
  - Percent of baseline vs. Days after challenge.
  - The graph shows a decrease from 100% on Day 0 to 60% on Day 17.
