Figure 2. Circulation of rotavirus within the country between 1988 to 2008. RV reported in a high prevalence of diarrhoea cases overall in KSA during 1988 to 2001 [13, 14, 6, 7]. Recent studies (after 2001) suggest that the incidence may be falling [12, 8, 10]. The decrease in the incidence of rotavirus explained by improvements in public health introduced in recent years.
