The figure shows the oxidized NADPH (nmol/mg protein/min) in different treatments:

- **Control**: High oxidation with a standard deviation indicated by a bar.
- **Piroxicam**: Lower oxidation compared to control, with a standard deviation indicated.
- **PGE2 Receptor Agonist**: Moderate oxidation with a standard deviation indicated.
- **Piroxicam + PGE2 Receptor Agonist**: Moderate to high oxidation with a standard deviation indicated.

The treatments are compared using lowercase letters indicating significant differences: a, b, and c.
