Total Lean Body Mass and Skeletal Muscle Mass by DXA and MRI

Graph showing the change in total lean body mass and skeletal muscle mass with age. The graph includes four lines:
- Bone-free LBM (black diamonds)
- SMM (DXA) (gray triangles)
- SMM (MRI) (black triangles)

The x-axis represents age in years (6 to 18), and the y-axis represents mass in kg (0 to 60). The lines show an increase in mass with age for all categories.
