The images show the agglomerates of different size distributions under various magnifications.

- **5 nm aerosols**: Small agglomerates at 12,000x magnification, large agglomerates at 120,000x magnification.
- **10-30 nm aerosols**: Small agglomerates at 12,000x magnification, large agglomerates at 120,000x magnification.
- **50 nm aerosols**: Small agglomerates at 12,000x magnification, large agglomerates at 120,000x magnification.

Scale bars indicate:
- 12,000x magnification: 200 nm
- 120,000x magnification: 20 nm
