Non-instilled Saline DEP

Myocardial viability (% of LV)

(a) Photograph showing saline and DEP treatments. Arrows indicate apoptotic cells.

(b) Bar graph showing apoptotic cells/2 mm² for Non-instilled, Saline, and DEP treatments. The DEP treatment has significantly higher apoptotic cell count.

(c) Bar graph showing myocardial viability (% of LV) for Non-instilled, Saline, and DEP treatments. The DEP treatment has significantly lower myocardial viability compared to the Non-instilled and Saline treatments.
