Figure 5

(A) Graph showing cAMP (pmol) levels under different conditions: control, 100 µM NMDA, 100 µM ATP, and 1 nM PACAP. Significant increases are indicated by **statistical symbols.

(B) Bar graph illustrating nNOSNT-YFP translocation (%) under control and with the addition of NMDA, ATP, 8-Br-cAMP, and 8-Br-cGMP. Significant differences are marked with *statistical symbols.
