Fig. 2

The graph shows the number of withdrawal responses over time after administration of Oxaliplatin with different concentrations of KN-93. The x-axis represents time after administration in minutes (0, 30, 60, 90, 120), and the y-axis represents the number of withdrawal responses. The graph includes bars and line graphs for different treatment groups: Oxaliplatin alone and with different concentrations of KN-93 (10 nmol, 20 nmol, 50 nmol). The significance of the difference is indicated by **.
