Figure 1.0: Flowchart illustrating trial design

- Approached by clinical team
- Discussion with research team
- Provision of informed consent
  - Yes
  - Screening for study criteria and recruitment
  - Meets study criteria
    - Baseline measures set 1 (prognostic indicators)
      - Assessment of ability to pedal
        - able
          - Baseline measures set 2 (clinical efficacy)
            - Randomisation
              - CPT
              - CPT + UniCam crank-assisted UP, ten mins daily, up to ten days
    - 30 days or less after stroke onset given further pedalling assessments
  - Does not meet study criteria
    - Excluded from trial
- No
  - Excluded from trial
