Figure 1: Effect of Interventions on the Treatment Received by Patients (RDT=Rapid Diagnostic Test)

**Expected Standard Practice**
- Facilities have access to RDTs
- Demonstration on RDT use

**Provider Intervention**
- Training on malaria diagnosis and treatment (includes demonstration on RDT use)
- Support visits

**Provider + School Intervention**
- Training on malaria diagnosis and treatment (includes demonstration on RDT use)
- Support visits
- Train teachers to initiate peer health education on malaria
- Support schools to hold malaria events

**Effects of Intervention on Providers and Community Members**
- Providers offer rapid diagnostic testing
  - Providers know malaria treatment guidelines and can treat based on test result
  - Improved community awareness of testing and treatment

**Effect on the Treatment Received by Febrile Patients**
- Some patients are tested prior to treatment and receive treatment according to malaria guidelines
- Moderate increase in the % of febrile patients treated according to the malaria guidelines compared to expected standard practice
- Large increase in the % of febrile patients treated according to the malaria guidelines compared to expected standard practice
