Randomization

Initiation of study treatment
25% albumin or normal saline IV twice daily x 6 doses

Study days 1-3

Study Treatment Held
- further diuresis deemed unnecessary
- hypotension requiring fluid bolus or vasopressors
- new or worsening acute kidney injury
- serum albumin >35 on two occasions, greater than 24 hours apart

Study Treatment Discontinued
- suspected adverse reaction
- patient leaves ICU
- patient dies

Patient reassessed daily for up to 72 hours
- may resume study treatment when caregiving team resumes diuresis

No further study treatment. Study data collected until discharge or 30 days
