- 18 months: follow-up observation (+ max. 6 weeks tolerance)

### Control group
- TAU

---

### Intervention Group

- Measurement of primary and secondary outcomes including physician chart-review, patients’ self-reported questionnaire & financial family burden

---

### Control Group

- Measurement of primary and secondary outcomes including physician chart-review, patients’ self-reported questionnaire & financial family burden

---

### Activities

- **Structured, IT-supported assessment** performed by net-case managers through home-visits/fac-to-face meetings to capture medical/non-medical needs
- **Goal setting between primary care physicians and patients based on results of the assessment**
- **Two-weekly/monthly* telephone monitoring by net-case managers using a structured monitoring list**
- **Digital structured blood sugar testing using Accu-Chek Smart Pix Device and 360° View (Roche Diagnostics)**
- **Comprises at least 3-monthly contacts with primary care physician in the scope of the Disease Management Programme Diabetes and potentially other health care utilization based on individual need and morbidity profile (for intervention AND control group)**

---

*Note: * indicates monthly monitoring, ** indicates weekly monitoring.*
